

Jiffypot®

*Where roots are
at home*

*Environmentally
friendly
alternative*

*Healthier
roots,
healthier crop*

*Save
labor costs*

The **Jiffypot** first appeared on the market in the mid 1950's and has over the years, grown into an ever increasing array of pots, strips (pots joint together as a strip) and poly-packs (pots pre-packed in a poly sleeve for easy handling). Today the Jiffypot is used for many different applications by many different growers worldwide.

Nurseries like Jiffypots because of the labor saving the pots can offer at the time of transplanting them into 1 or 2 gallon pots.

Landscapers like them because of the labor saving of planting pot and all into the ground, no need to pull off the pot, no need to clean pots once the site is planted. Greenhouse applications for rooting cuttings or seed, than potting up into larger containers planting the young plant with pot and all into the next container. Fast and easy.

The Jiffypot has also found its way in to greenhouse growers, growing herbs, hydroponic lettuce, orchids and other pot

plants. It is hard to find a crop the Jiffypot is not suited for.

As an environmentally friendly alternative to any plastic container, Jiffypots are 100% compostable and approved for organic production. They are well suited for mechanical handling.

Best of all, Jiffypot is certified 'home compostable', no chemicals are used during the production of the pots, making it the obvious choice for use in combination with any food crop.
