

Propagating Substrate A 280

Composition:

20% white peat (fine)
80% black peat (fine)
NPK 14-10-18
Trace elements
Wetting agent
pH approx. 5,8 – 6,2

Packing:

80 L Bags

Due to the higher content of black peat in this substrate this product is especially suitable for growing vegetables in soil blocks because under increased pressure the substrate particles bind together.

Advantages:

High percentage of black peat for improved water holding capacity.

Application:

Vegetable young plants in trays
Vegetable young plants in press pots (soil blocks)

Wachstum
braucht Wurzeln.
