Propagating Substrate S 200

Composition:

70% White Peat 0-8 mm
30% Black Peat 0-8 mm
1 kg NPK 14-10-18
50 g Trace Elements
Wetting Agent
pH-Wert 5,5 – 6,0

Packing:

250 L Bales

S 200 is the perfect propagating substrate for producing vegetables in trays. Especially developed for production in warm regions of the world where water holding capacity is an important topic in horticulture this product is the best argument for sophisticated substrates produced by Stender.

A perfectly balanced composition of high quality white peat and selected black peat provide an ideal environment for vegetable seeds, young plants and cuttings.

Giving wetting agent to the substrate makes sure that the watering works very well.

Advantages:

Increased water holding capacity due the amount of black peat – less irrigation saves water.

Application:

Seedlings of vegetable young plants in trays
Ornamental plants in trays
